About the cover

The illustration on the cover was derived from the article, "Detection of Infectious Bursal Disease Virus Isolates with Unknown Antigenic Properties by Reverse Genetics" by Drs. Alan H. Icard, Holly S. Sellers, and Egbert Mundt. The authors used the reverse genetics system of infectious bursal disease virus to characterize several antigenic types of field viruses. The results showed that nucleotide sequence of a virus did not predict its antigenic makeup. The complete article begins on page 590 of this issue.
